

Production, Inventory/Material and Equipment Tracking

Data:Maxx™ Optional Modules

Data-Maxx™ provides optional modules for tracking production, inventory and materials, and equipment. Since these modules are optional, you can elect to add them at the time you install your Data-Maxx solution or at a later date.

Production Tracking

Track quantities of units placed by job and task, employee, or crew. Choose from reports that track important management data such as cost-per-unit and cumulative units placed by job or job and task. Using the Data-Maxx Production module you can:

- Scan or enter crew or individual production by job and task,
- Enter units of measure for each job's tasks within Data-Maxx,
- Report on cumulative units and labor dollars with range of employee IDs, job numbers, departments, divisions, and date ranges,
- Obtain cost per unit calculations based on pay rates and time worked,
- Export units placed to compatible accounting systems that allow this.

Note: Most job cost accounting systems allow for tracking of production units along with cost information. If this feature is not available in your job cost system or if you use a payroll service bureau, Data-Maxx can be customized to hold your budget information and create variance reports based on your labor costs and production units tracked through the Data-Maxx solution.

Inventory / Materials Tracking

Track item receipts, shipments, and transfer transactions by job, warehouse or other

location as well as physical inventory data collection. Import data directly into most accounting software's inventory facilities. In addition, inventory/material tracking lets you:

- Create bar codes for items or materials on paper, labels, or cards,
- Scan or enter items received, transferred, shipped, or on-hand quantities,
- Scan jobs, tasks, locations or warehouses to which items are being shipped, transferred, or received,
- Track item cost rates allowing for calculations of costs per item,
- Enter number of units directly by keypad or scanner,
- Export inventory/material-tracking information to most standard accounting packages. (Check with your Data-Maxx business consultant to see if we can integrate with yours),
- Report on items and on-hand quantities, shipments, receipts, and transfers with totals by locations, division, department, job, or date range,
- Report on item status being tracked as a job or work order.

Equipment Tracking

Track equipment usage in real time or at the end of the day by job and task. Also:

- Create bar codes for equipment on sheets, labels, or cards,
- Track equipment as it arrives and departs the job by scanning it in or out (real time) or input the hours the equipment was used at a later time (after-the-fact),
- Track equipment by job and task,
- Meter readings can be entered, depending on setup,

- Equipment can be reported with the labor for a job or by itself,
- Equipment cost rates can be inputted allowing for calculations of equipment costs by job or job/task,
- Reports can be generated showing: all the time that equipment was used, cumulative costs by job or task, and meter readings if applicable,
- Equipment information can be exported to most standard accounting packages. Contact your Data-Maxx business consultant to see if we can integrate with yours.
