

Improve Payroll/HR Operations, Control Labor Costs

Sage Abra HRMS and Timberline Payroll Employee and Attendance Synchronization May 2008 Feature Sheet

Add the power of Sage Abra Human Resources Software to Timberline Payroll Operations

Save time and minimize errors with BASpay's Interface for Sage Abra HRMS and Sage Timberline Office Payroll. This menu-driven, direct read/write program allows Timberline Payroll Managers to easily import employee data from Abra Human Resource software. Optionally, for initial data conversion, Abra can be loaded from Timberline. This approach minimizes re-keying of data in the receiving system. Options are also available to transfer time-off activity to or from Abra Attendance.

Synchronize HR and Payroll employee masterfiles and benefits efficiently and consistently

- With the BASpay Abra / Timberline HR Synchronization program you can efficiently synchronize Timberline Payroll Employee Master Files, deductions, fringes, pay records and custom fields with Abra Suite Human Resources employee master data.
- Timberline Payroll processes complex construction and property management payrolls. Now, add the power of Abra HR and reliably transfer data for new-hires and changes to Payroll.

Speed Up New Hire processing for HR and Payroll

- Speed up processing! No need to re-key employee data before running payrolls on new employees. Add employees to Abra HR then, quickly update the data to Timberline PR.

Automatic data translation available

- Cross-reference tables map data so it can be recognized by both systems. Translation tables are available for all organization levels, company codes, deduction, benefit and fringe codes and more. If needed, specialized versions can be developed with additional cross-referencing to ensure a smooth data transfer.

Validation and auditing included

- The BASpay program includes automatic validation based on lookups and setup rules in Abra and Timberline to guarantee the accuracy of the information before transfer.
- Exception reports identify problems like unrecognized pay groups, departments, or pay codes. You can correct these errors or cross references before sending the data to the Payroll system.

Contact BAS
